

Product Specification Sheet

Custom Metal A-Frame Signs

Custom Metal A-Frame Signs ship as a complete kit: a black angle iron frame and your printed 6mm coroplast inserts packed together and ready to display on arrival. The frame handles moderate outdoor wind without anchoring. Both sides show your graphic, so placement at any sidewalk angle works.

Material

Angle iron frame with black powder coat finish. Insert is 6mm coroplast (corrugated plastic, rigid and waterproof).

The frame resists rust and the insert sheds rain without warping.

Print Method

Direct UV print applies ink onto the coroplast surface and cures it with ultraviolet light.

The result is a scratch-resistant, waterproof finish that holds color outdoors.

Color Output

Full color across the entire insert face using CMYK printing (cyan, magenta, yellow, and black combined).

Logos, photos, and bold text reproduce without color limits.

Finishing

Coroplast inserts slide into the frame from the top and lock in place with no tools needed.

Swap inserts in seconds when your message changes.

Size Range

Standard insert is 24x36 in. Large insert option is 32x48 in.

The large size suits busy streets or placements farther from the entrance.

Indoor/Outdoor Rating

Rated for both indoor and outdoor use. UV-printed coroplast lasts roughly 6 to 12 months in direct outdoor sun, longer indoors.

The metal frame handles moderate outdoor wind.

Single/Double-Sided

Both sides display your graphic. Order single-sided or double-sided inserts depending on your placement.

Foot traffic from either direction sees your message.

Weight

Metal angle iron frame weighs roughly 15 to 20 lbs.

That weight keeps the frame grounded in moderate wind without anchoring on most sidewalk placements.
