

Product Specification Sheet

Custom Wheeled Snap In A-Frame Signs

Custom Wheeled Snap In A-Frame Signs ship as a complete kit: molded plastic and aluminum wheeled frame plus your printed coroplast inserts, ready to roll out and display. The 4 mm coroplast insert panel handles daily outdoor sidewalk use and swaps in seconds without tools. Both faces print, both faces display.

Material

4 mm coroplast insert panels. Molded plastic and aluminum wheeled frame with wheels integrated into the base.

Coroplast is corrugated plastic sheeting, rigid and waterproof, built for repeated outdoor exposure.

Print Method

Direct UV print applied straight to the coroplast surface and cured by ultraviolet light.

Cured ink resists scratching and moisture from daily sidewalk use.

Color Output

Full CMYK (cyan, magenta, yellow, and black, the standard 4-color printing process) on every insert.

Bold graphics and sharp text reproduce accurately on both faces.

Finishing

Coroplast inserts slide into the frame from the top and snap into place with no tools.

Pull the old insert out, slide the new one in, and the frame stays put.

Size Range

Standard insert at 24 x 36 in. Large insert at 32 x 48 in for higher-traffic sidewalk locations.

Both sizes ship with the same wheeled frame.

Indoor/Outdoor Rating

Rated for both indoor and outdoor use in moderate wind conditions.

UV-printed coroplast inserts typically hold up 6 to 12 months in direct daily sun before graphics show visible fade.

Single/Double-Sided

Double-sided display on every unit. Both faces print and both faces are visible.

Foot traffic from either direction reads your message without walking around the sign.

Weight

Roughly 10 to 13 lbs for the complete molded plastic and aluminum wheeled frame.

Light enough for one person to roll in and out daily without strain.
