

Product Specification Sheet

Custom Windsign Wind Resistant A-Frame Signs

Custom Windsign Wind Resistant A-Frame Signs run on a molded plastic frame with 4 mm coroplast inserts printed in full-color UV ink. They suit any storefront, cafe, or salon that moves its sidewalk sign in and out daily and needs graphics it can swap without replacing the whole frame.

Material

4 mm coroplast inserts (corrugated plastic, rigid and waterproof). Molded plastic frame, lighter than metal angle iron.

Coroplast holds a direct UV print without absorbing moisture, so outdoor graphics stay intact through rain and humidity.

Print Method

Direct UV print bonds ink to the coroplast surface and cures it with ultraviolet light.

The cured finish is scratch-resistant and waterproof. It does not peel or crack under typical outdoor conditions.

Color Output

Full CMYK (cyan, magenta, yellow, and black combined to reproduce the full color spectrum) on every insert.

Logos, photos, and bold text all reproduce accurately at sidewalk viewing distances.

Finishing

Coroplast inserts slide into the frame from the top and lock in place with no tools needed.

Swap a panel in under a minute. No hardware, no help.

Size Range

Standard insert size is 24 x 36 in, which reads clearly from roughly 10 to 15 ft away.

This fits most sidewalk placements without blocking pedestrian clearance.

Indoor/Outdoor Rating

Rated for both indoor and outdoor use. UV-printed inserts hold up 6 to 12 months in direct outdoor sun.

The molded plastic frame handles moderate sidewalk wind without tipping.

Single/Double-Sided

Double-sided display on both faces simultaneously.

Foot traffic from either direction on the sidewalk sees your message without repositioning the sign.

Weight

Molded plastic frame weighs roughly 10 to 13 lbs.

Light enough for one person to carry by the top handle or roll on the base wheels without help.
