

Product Specification Sheet

Custom Wooden A-Frame Chalkboard Signs

Custom Wooden A-Frame Chalkboard Signs are freestanding, two-sided sidewalk signs built from a solid wood frame with a black chalkboard panel face. They suit restaurants, cafes, salons, and retail shops that want a handwritten, artisan look without reprinting daily. Both sizes fold flat for storage after every shift.

Material

Solid wood frame with a fixed black chalkboard panel face.

The wood construction gives the sign a sturdy, warm look suited to cafe and restaurant sidewalk placement.

Print Method

Chalkboard surface accepts standard chalk or chalk markers by hand.

You write directly on the panel and wipe it clean to update your message anytime.

Color Output

Black chalkboard panel. White or colored chalk lettering shows clearly against the black surface from roughly 10 to 15 ft away.

Finishing

Chalkboard panel is fixed to the wood frame. The A-frame folds flat for storage and transport at the end of each shift.

Size Range

24 x 36 in standard. 32 x 48 in large option for higher-visibility sidewalk placement on busier streets.

Indoor/Outdoor Rating

Suited for both indoor and outdoor use. Best placed in sheltered sidewalk positions. Bring the sign inside overnight to extend its life.

Single/Double-Sided

Double-sided. Both faces display your chalkboard message, so pedestrians from either direction read the sign without repositioning it.

Weight

Roughly 15 to 20 lbs. That weight gives the sign enough stability to hold position on a calm to moderate-wind sidewalk.
