

Product Specification Sheet

S Shaped Tension Fabric Backdrops

S Shaped Tension Fabric Backdrops combine a 10 ft aluminum EZ Tube frame with a pillow-case stretch fabric graphic to create a flowing serpentine wall display. The graphic surface curves through alternating convex and concave sections, giving large booth environments visual depth that flat or straight displays can't replicate. Best for trade show backwalls, brand activations, and indoor environments where the display doubles as a room divider.

Material

Stretch polyester fabric (pillow-case sleeve style).

The tightly woven polyester tensions over the frame, hiding all hardware behind a smooth, taut graphic face.

Print Method

Dye sublimation.

Ink converts to gas and bonds into the polyester fibers, so colors stay crisp and the surface doesn't crack after repeated folding.

Color Output

Full-color CMYK.

All four ink channels combine to reproduce logos, photography, and gradients accurately across the entire serpentine surface.

Finishing

Pillow-case sleeve (zips on and off the EZ Tube frame).

You can swap graphics between events without replacing any hardware.

Size Range

10 ft aluminum EZ Tube frame; graphic print area follows the serpentine S-curve span.

Suited to booth spaces of roughly 10x20 ft or larger.

Indoor/Outdoor Rating

Indoor use only.

Stretch fabric absorbs moisture, and the EZ Tube frame is not rated for wind load or rain exposure.

Single/Double-Sided

Single-sided.

The printed face covers the convex and concave serpentine surface; the back shows the raw fabric sleeve and tube hardware.

Weight

Roughly 8 to 25 lbs depending on display type and size.

The included EZ Tube carry bag holds collapsed frame sections and the folded fabric graphic for transport.
