

Product Specification Sheet

Wall Box Fabric Displays

Wall Box Fabric Displays combine a rigid aluminum box frame with stretched polyester fabric to create a flush, gallery-style branded surface. This is the display for corporate lobbies and retail feature walls where a hanging banner would read as too temporary. Every unit ships with a carry bag included.

Material

Polyester fabric stretched over a rigid aluminum box frame.

The fabric pulls tight on all four sides so the graphic stays smooth and flat without wrinkles.

Print Method

Dye sublimation.

Ink converts to gas and bonds directly into polyester fibers so color does not sit on the surface where it can crack.

Color Output

Full-color CMYK across the entire graphic surface.

CMYK uses cyan, magenta, yellow, and black to reproduce any brand color accurately.

Finishing

Fabric stretches over the rigid box frame and locks in place.

No grommets, hems, or pole pockets needed. The frame itself is the finishing element.

Size Range

Varies by configuration.

Contact us for available widths and heights to match your wall space or booth panel dimensions.

Indoor/Outdoor Rating

Indoor use only.

Polyester fabric absorbs moisture and the aluminum box frame is not rated for outdoor wind or rain.

Single/Double-Sided

Single-sided standard.

The frame mounts flush to a wall or stands freestanding with the graphic facing one direction.

Weight

Varies by frame size.

The included carry bag keeps all components together so transport between locations stays manageable.
