

Product Specification Sheet

Webcam Backdrops

Webcam Backdrops run on smooth polyester fabric stretched over a snap-together aluminum EZ Tube frame. Sized typically 5 to 7 ft wide, they fill a camera frame behind a desk or chair without taking over a home office or studio. Every spec below applies to this product.

Material

Polyester fabric.

Smooth, wrinkle-resistant surface absorbs dye sublimation ink directly into the fibers, so color stays bold with zero glare on camera.

Print Method

Dye sublimation.

Ink converts to gas and bonds at the fiber level, giving you a matte finish with no cracking or peeling over repeated use.

Color Output

Full-color CMYK.

Cyan, magenta, yellow, and black combine to reproduce logos, gradients, and photography accurately across the full graphic surface.

Finishing

Pillow-case zip-on sleeve.

The fabric graphic zips around the aluminum EZ Tube frame like a sleeve, hiding all hardware so the camera sees only your design.

Size Range

Typically 5 to 7 ft wide.

Sized to fill a standard webcam frame at a distance of roughly 3 to 5 ft from the subject.

Indoor/Outdoor Rating

Indoor use only.

Polyester fabric absorbs moisture outdoors and the aluminum EZ Tube frame is not rated for wind load. Indoor life is open-ended with proper care.

Single/Double-Sided

Single-sided standard.

The back of the pillow-case graphic faces the wall, so double-sided is not needed for this format.

Weight

Light. Varies by size.

The frame breaks into tube sections and fits in the included carry bag for storage or transport between sessions.
