

Product Specification Sheet

Double X Micro GeoMetrix Tabletop Display

The Double X Micro GeoMetrix Tabletop Display connects two aluminum X-frames into one accordion-shaped structure. Graphic panels run 240g elastic polyester fabric and attach magnetically to the grid. It suits 8 ft tables where a single flat panel leaves most of the surface uncovered.

Material

240g elastic polyester fabric on every graphic panel.

The heavier weight holds each panel taut against the frame without sagging or pulling away at the edges.

Print Method

Dye sublimation.

Ink converts to gas and bonds directly into the polyester fibers, so colors stay crisp and do not crack over repeated use.

Color Output

Full-color CMYK (cyan, magenta, yellow, and black combined).

Reproduces brand colors, gradients, and photography across every panel without flat patches or color banding.

Finishing

Magnetic panel attachment with sewn-in magnetic strips along each panel edge.

Panels snap onto the aluminum grid frame and release without clips, velcro, or tools.

Configuration

Double X (two X-frames connected into one accordion-shaped structure).

Widest X-frame option in the Micro GeoMetrix line. Suited for 8 ft tables where a single X leaves most of the surface uncovered.

Indoor/Outdoor Rating

Indoor use only.

Aluminum frame and magnetic fabric panels are not rated for outdoor wind or rain.

Panel Attachment

Multi-panel display. Each face carries a separate printed panel. Replacement panels ordered for the Double X fit only the Double X frame.

Portability

Carry bag included. Frame collapses flat. Panels stack inside. One person can carry the full kit through a convention center.
