

Product Specification Sheet

X Micro GeoMetrix Tabletop Display

The X Micro GeoMetrix Tabletop Display runs on an aluminum pop-up grid frame with 240g elastic polyester graphic panels that attach magnetically. It sits on a standard table and creates a 3D X-shaped silhouette visible from multiple approach angles. This display is built for indoor tabletop use only.

Material

240g elastic polyester fabric panels on an aluminum pop-up grid frame.

The 240g weight keeps panels taut under tension so graphics read crisply across each face.

Print Method

Dye sublimation (ink converts to gas and bonds directly into polyester fibers).

Colors absorb into the fabric rather than sitting on top, so the surface stays smooth and does not crack.

Color Output

Full-color CMYK using cyan, magenta, yellow, and black.

Logos, gradients, and photographic images all reproduce accurately across every panel.

Finishing

Magnetic panel attachment along panel edges. No clips, no velcro, no tools.

Panels snap onto the aluminum grid frame and remove just as easily for replacement or washing.

Size Range

Fits on 4 ft to 8 ft tables depending on placement. Open center leaves room for product samples or brochures on either side.

Indoor/Outdoor Rating

Indoor use only. Frame and magnetic polyester panels are not rated for outdoor wind or rain.

Single/Double-Sided

Each face of the X frame carries its own graphic panel. Visitors from different angles see different branded faces.

Weight

Complete kit (frame, panels, and carry bag) is portable enough for one person to carry and transport.
