

Product Specification Sheet

Curved Fabric Pop Up Displays

Curved Fabric Pop Up Displays run on a collapsible aluminum accordion frame with a tension fabric polyester graphic stretched over the curved surface. The fabric stays taut so the graphic face appears smooth and wrinkle-free throughout your event. These displays suit indoor booth backwalls where setup speed and solo portability matter most.

Material

Tension fabric polyester graphic over collapsible aluminum accordion frame.

The fabric slides over the frame and stays taut across the curved surface, keeping the graphic smooth.

Print Method

Dye sublimation.

Ink converts to gas and bonds into the polyester fibers, so the graphic won't crack, peel, or fade after repeated folding.

Color Output

Full-color CMYK.

Every color in your brand palette prints accurately across the entire curved graphic face.

Finishing

Printed end caps included.

End caps cover the side edges of the frame so the display looks finished from every viewing angle.

Size Range

8 ft and 10 ft booth sizes.

The 8 ft width suits tighter spaces. The 10 ft width fills a standard trade show backwall edge to edge.

Indoor/Outdoor Rating

Indoor use only. Not rated for outdoor wind or rain.

Typical indoor display life runs 12 months or longer with proper storage between events.

Single/Double-Sided

Single-sided graphic standard.

The curved face points toward your audience. The back of the frame is not printed.

Weight

8 to 25 lbs depending on display size. Carry bag included with every order.

Lighter sizes fit in checked luggage. Heavier configurations still load into a car trunk without a freight cart.
