

Product Specification Sheet

Vertical Pop Out Banners

Vertical Pop Out Banners run on a spring steel frame in portrait orientation. The graphic surface is 65g peach skin fabric printed with dye sublimation on both faces. These displays are built for indoor trade show floors, lobbies, retail interiors, and conference halls where fast solo setup matters most.

Material

65g peach skin fabric. A soft, matte-surface polyester that takes dye sublimation ink directly into the fibers, staying smooth and glare-free.

Print Method

Dye sublimation. Ink converts to gas and bonds into the polyester fibers, so colors hold through repeated folding and carry bag storage.

Color Output

Full-color CMYK. Cyan, magenta, yellow, and black cover your complete brand palette accurately on both faces.

Finishing

Spring steel frame. Collapses flat for storage, pops open into a freestanding portrait display without tools or assembly steps.

Size Range

Portrait orientation. Exact dimensions depend on the configuration selected at checkout.

Indoor/Outdoor Rating

Indoor use only. Not rated for outdoor wind or rain. Plan for lobby, trade show floor, retail interior, or conference hall placement.

Single/Double-Sided

Double-sided standard on every unit. Both faces carry full-color dye sublimation graphics at no extra charge.

Weight

Roughly 5 lbs or under depending on size, carry bag included. Light enough for one person to carry alongside other event gear.
