

Product Specification Sheet

Retractable Roll Up Banner Stands

Retractable Roll Up Banner Stands run a vinyl graphic on a lightweight silver aluminum base with a spring-loaded retractable cassette. The cassette stores and tensions the graphic so it pulls up smooth and curl-free every time. These stands are built for single-event or low-frequency indoor use where a sharp, full-color display needs to go up fast.

Material

Vinyl graphic on a lightweight silver aluminum base with a spring-loaded retractable cassette.

The cassette protects the printed surface from scratches and dust between uses.

Print Method

Eco-solvent printing (ink bonded directly to the vinyl surface) at up to 720 DPI.

Crisp text and bold color hold up through repeated retraction and extension cycles.

Color Output

CMYK full-color using cyan, magenta, yellow, and black.

Every color in your artwork prints accurately across the full graphic face.

Finishing

Retractable cassette mechanism at the base rolls the graphic in after each use.

The printed surface stays protected during transport and storage.

Size Range

Width runs up to roughly 33 in. Height adjusts typically from 78 to 85 in via a telescoping support pole.

The display reaches eye level and above for most indoor environments.

Indoor/Outdoor Rating

Indoor use only. Not rated for outdoor wind or rain.

Under stable indoor conditions the vinyl graphic holds up 1 to 3 years with light to moderate use.

Single/Double-Sided

Single-sided standard on this entry-level model.

For a display visible from both directions, see the Deluxe Double-Sided Retractable Banner Stand.

Weight

Total unit weight runs 8 to 12 lbs depending on size. Carry bag included.

One person transports the full unit in a single trip.
