

Product Specification Sheet

Step and Repeat U Shaped Tension Fabric Displays

Step and Repeat U Shaped Tension Fabric Displays wrap a pillow-case polyester graphic across a three-walled aluminum EZ Tube frame. The U-shaped enclosure puts logos on the back wall and both side walls at once. These displays are built for indoor photo events where every camera angle matters.

Material

Polyester tension fabric zipped over a 1.25 in diameter aluminum EZ Tube frame.

The pillow-case sleeve hides every connector and tube, so the camera sees one continuous branded wall.

Print Method

Dye sublimation (ink converts to gas and bonds directly into the polyester fibers).

This produces bold, saturated color with a matte finish that absorbs flash without hot spots.

Color Output

Full-color CMYK across all three walls.

Logo color and spacing stay uniform from the back wall across both side walls.

Finishing

Pillow-case sleeve zips over the frame from the outside, fully concealing all hardware.

The surface reads as one continuous branded wall from any camera angle.

Size Range

Frame width and depth vary by configuration across three connected wall sections.

Contact us for exact footprint dimensions based on your venue space.

Indoor/Outdoor Rating

Indoor use only. Not rated for outdoor wind or rain.

With proper storage, the fabric and frame typically last years across repeated events.

Single/Double-Sided

Single-sided. The graphic faces inward toward the photo subject on all three walls.

The outer frame back is not printed.

Weight

Roughly 8 to 25 lbs depending on display size. A carry bag is included with every order.

The frame and fabric pack together for transport in one load.
