

Product Specification Sheet

Custom Homecoming Banners

Custom Homecoming Banners are printed on PVC Flex vinyl in two weights sized for gym walls, stadium fences, and pep rally stages. Full CMYK color carries team mascots and school names across the full banner face. Both weights suit indoor and outdoor school event setups.

Material

PVC Flex vinyl. A smooth, glossy surface that resists moisture and holds printed color under gym lighting and stadium floodlights.

Print Method

Eco-solvent or UV inkjet. Weather-resistant inks bond to the vinyl surface and stay sharp through repeated hanging and handling.

Color Output

CMYK full color (cyan, magenta, yellow, and black combined). Reproduces team colors, mascot art, and school names without color banding across the banner face.

Finishing

Brass grommets every 2 ft. Pole pockets slide over a rod for clean stage backdrops. Hem and heat weld seals edges for frame-mounted displays.

Size Range

Custom sizes from 2 ft x 3 ft up to large formats. Banners wider or taller than 10 ft include a welded seam (heat-fused, not stitched) that holds panels flat under tension.

Indoor/Outdoor Rating

Both. Outdoor banners hold color roughly 6 to 12 months with UV-resistant inks. Indoor banners last longer away from direct sun and rain.

Single/Double-Sided

Single-sided is standard for wall and fence mounting. Double-sided uses a blackout liner (a white layer between front and back prints) to prevent show-through.

Weight

11 oz for indoor or light-duty outdoor use. 16 oz for outdoor stadium fences, exterior walls, and locations with regular wind exposure.
