

Product Specification Sheet

Custom Wedding Banners

Custom Wedding Banners print on PVC Flex vinyl or soft polyester fabric, each matched to a different venue setting. Vinyl suits outdoor ceremonies and yard displays. Fabric handles indoor receptions where drape and zero glare matter most.

Material

PVC Flex vinyl (smooth, glossy, moisture-resistant). Polyester fabric (soft, natural drape, no surface glare).

Vinyl holds ink evenly outdoors. Fabric absorbs dye into its fibers for a matte, textile finish.

Print Method

Eco-solvent or UV inkjet for vinyl. Dye sublimation for fabric.

UV inkjet bonds ink to the vinyl surface. Dye sublimation fuses color into fabric fibers so it will not crack.

Color Output

CMYK full color (cyan, magenta, yellow, and black combined).

Matches most wedding palettes within the standard 4-color gamut.

Finishing

Brass grommets every 2 ft. Pole pockets along top or bottom edge. Hem and heat weld available.

Banners wider or taller than 10 ft include a heat-welded seam for structural hold.

Size Range

2 ft x 4 ft for directional and handheld signs up to large ceremony backdrops.

Custom sizing is available. Seam construction applies to any banner exceeding 10 ft in width or height.

Indoor/Outdoor Rating

Vinyl is rated for both indoor and outdoor use, roughly 6 to 12 months in direct sun with UV-resistant inks. Fabric suits indoor use and light outdoor conditions only.

Single/Double-Sided

Single-sided is standard. Double-sided uses a blockout liner (a white layer between front and back prints) to prevent color bleed-through.

Weight

11 oz PVC Flex for indoor or short-term outdoor use. 16 oz PVC Flex for outdoor ceremonies needing shape and tension through wind.
