

Product Specification Sheet

Custom Welcome Home Banners

Custom Welcome Home Banners print on PVC Flex vinyl in 11 oz or 16 oz weights. Both weights handle indoor and outdoor display. The 16 oz is the better choice for open driveways and front yards with direct sun and wind exposure.

Material

PVC Flex vinyl.

A smooth, glossy outdoor material that resists warping and fading through short-term outdoor display.

Print Method

Eco-solvent or UV inkjet.

Weather-resistant inks bond directly to the vinyl surface so colors stay crisp through rain and sun.

Color Output

CMYK full color.

Cyan, magenta, yellow, and black combine to reproduce photos, bold text, and graphic details across the full banner.

Finishing

Brass grommets every 2 ft. Pole pockets. Hem and heat weld.

Each option suits a different mounting setup: grommets for fences and railings, pole pockets for rods, hem weld for frames.

Size Range

Custom sizing available. Banners wider or taller than 10 ft include a welded seam (a heat-bonded join holding panels together without visible gaps).

Indoor/Outdoor Rating

Outdoor rated roughly 6 to 12 months with UV-resistant inks. Indoor display lasts longer because the banner avoids direct sun and rain.

Single/Double-Sided

Single-sided is standard. Double-sided adds a blackout liner so neither face shows through to the other.

Weight

11 oz or 16 oz.

The heavier the weight, the better it holds in open wind without sagging or flapping.
