

Product Specification Sheet

Custom Polyester Fabric Banners

Custom Polyester Fabric Banners run on 9 oz wrinkle-resistant polyester printed with dye sublimation. The result is a smooth, crisp fabric surface built for indoor trade show backdrops, photo walls, and stage displays where glare-free appearance matters most.

Material

9 oz wrinkle-resistant polyester fabric.

Light folds from shipping relax quickly once the banner hangs, typically without steaming.

Print Method

Dye sublimation, where ink heats and absorbs directly into the polyester fibers.

The print won't crack, peel, or flake even after machine washing and repeated folding.

Color Output

CMYK full color (cyan, magenta, yellow, and black combined to reproduce most brand colors).

Colors appear slightly richer on dark backgrounds than on light pastels with dye sublimation.

Finishing

Brass grommets every 2 ft along the edges. Pole pockets sewn along the top or bottom edge. Hem and heat weld (edges folded and sealed with heat for a reinforced finish).

Size Range

Custom sizes available.

Order the exact dimensions your display setup needs rather than choosing from fixed sizes.

Indoor/Outdoor Rating

Primarily indoor. Handles light outdoor use under a tent or covered awning for short durations. Not rated for prolonged rain or sustained wind.

Single/Double-Sided

Single-sided standard. Double-sided with a blockout liner (a white layer between front and back prints that stops show-through) is available.

Weight

9 oz per square yard.

Lighter than vinyl at 13 oz or 16 oz, so the banner drapes naturally without pulling frames out of alignment.
