

Product Specification Sheet

Custom Fabric Step and Repeat Banners

Custom Fabric Step and Repeat Banners run on 9 oz dye-sublimated polyester, a matte, wrinkle-resistant fabric built for indoor photo walls and event backdrops. The surface absorbs ink into the fibers so colors stay crisp through folding, transport, and reuse. Custom Fabric Step and Repeat Banners are the right call any time flash photography or booth lighting is part of the event.

Material

9 oz polyester fabric.

The matte surface absorbs ink into the fibers so it won't crack, peel, or flake through repeated handling.

Print Method

Dye sublimation.

Heat bonds ink into the fabric fibers so colors stay saturated through machine washing and folding.

Color Output

CMYK full color.

The 4-color process covers most brand color ranges and reproduces repeating logo patterns with consistent tone.

Finishing

Grommets (brass, every 2 ft). Pole pockets. Hem and heat weld.

Each option suits a different hanging setup, from pipe-and-drape systems to wall-mounted rods.

Size Range

Custom sizes available.

Order the exact dimensions your backdrop frame or venue wall needs without being locked into standard sizes.

Indoor/Outdoor Rating

Primarily indoor.

Handles light outdoor use under a tent or awning. Not rated for direct rain or sustained wind.

Single/Double-Sided

Single-sided standard. Double-sided with blockout liner available.

The blockout liner (a white layer between front and back prints) stops show-through when both faces are visible.

Weight

9 oz.

Lighter than standard outdoor vinyl so the fabric drapes naturally and hangs flat without pulling hardware out of alignment.
