

Product Specification Sheet

Custom Christmas Banners

Custom Christmas Banners print on PVC Flex vinyl or polyester fabric, depending on where you plan to hang yours. Vinyl handles outdoor storefronts and yard displays. Fabric suits indoor stages, lobbies, and party backdrops. Both deliver full-color results with bold, crisp output from edge to edge.

Material

PVC Flex vinyl (smooth, glossy outdoor surface) in 11 oz or 16 oz. Fabric option uses polyester with a soft drape and no surface glare.

Heavier vinyl holds up longer outdoors. Fabric keeps colors vivid indoors without reflecting stage or overhead lighting.

Print Method

Eco-solvent or UV inkjet for vinyl. Dye sublimation for fabric (ink absorbs into fibers so it won't crack or peel).

Each method matches the material so color stays locked in through the full holiday season.

Color Output

CMYK full color on every order.

Matches most brand colors within the standard gamut, so your reds stay bold and your whites stay crisp.

Finishing

Brass grommets every 2 ft along the border. Pole pockets also available. Hem and heat weld rounds out the finishing options.

Choose the finish that matches your mount: hooks and zip ties need grommets, rods need pole pockets.

Size Range

Fully custom sizing available. Banners wider or taller than 10 ft include a heat-welded seam at no extra step on your end.

Indoor/Outdoor Rating

Vinyl is rated 6 to 12 months outdoors with UV-resistant inks. Fabric handles indoor use and light outdoor exposure but is not rated for prolonged rain or wind.

Single/Double-Sided

Single-sided is standard. Double-sided uses a blockout liner (a white layer between front and back prints that stops one side from showing through the other).

Weight

11 oz vinyl for indoor and light-duty outdoor use. 16 oz vinyl for heavy-duty outdoor display. Fabric weight is not rated by ounce but drapes naturally and is machine washable.
