

Product Specification Sheet

Custom Military Banners

Custom Military Banners print on PVC Flex vinyl in 11 oz or 16 oz weight, built to carry names, ranks, photos, and unit insignia for tribute and ceremony use. Both weights handle indoor and outdoor display. Here's the thing: material weight is the single biggest decision you'll make on this order.

Material

PVC Flex vinyl.

A smooth, glossy surface that holds ink cleanly through heat, humidity, and direct sun without cracking or peeling.

Print Method

Eco-solvent or UV inkjet.

Both methods lay weather-resistant ink onto the vinyl surface, holding color outdoors for roughly 6 to 12 months.

Color Output

CMYK full color.

The 4-color process using cyan, magenta, yellow, and black reproduces branch colors, insignia, and portrait photos across the full print area.

Finishing

Brass grommets every 2 ft. Pole pockets and hem and heat weld also available.

Each option suits a different mounting setup: grommets for rope or zip ties, pole pockets for rods, heat weld for clean framed edges.

Size Range

Custom sizing available. Banners wider or taller than 10 ft include a welded seam (a heat-bonded join line) for structural support.

Plan your layout so the seam falls across a solid background, not across a face or text block.

Indoor/Outdoor Rating

Both weights work indoors and outdoors. The 16 oz is rated roughly 6 to 12 months in direct sun.

The 11 oz suits short-term outdoor use and indoor ceremony halls.

Single/Double-Sided

Single-sided is standard. Double-sided uses a blockout liner (a white layer between front and back prints) to prevent show-through.

Choose double-sided when both faces of the banner are visible to approaching traffic.

Weight

11 oz or 16 oz.

The 11 oz is lighter and easier to hang indoors. The 16 oz is thicker and resists sagging in sustained outdoor wind.
