

Product Specification Sheet

Custom School Banners

Custom School Banners print on PVC Flex vinyl, a smooth, glossy material built to hold bold ink without cracking indoors or out. Two weights cover every school setup, from hallway honor roll displays to fence-mounted stadium banners that run through a full sports season.

Material

PVC Flex vinyl.

Resists moisture and holds ink without cracking across indoor and outdoor school setups.

Print Method

Eco-solvent or UV inkjet.

Weather-resistant inks bond directly to the vinyl surface and stay sharp outdoors for roughly 6 to 12 months.

Color Output

CMYK full color (cyan, magenta, yellow, and black combined).

Covers the full range of school colors, mascot graphics, and photo-based layouts.

Finishing

Brass grommets every 2 ft. Pole pockets. Hem and heat weld (folded, heat-sealed edges for a reinforced border).

All three options are available at order.

Size Range

Fully custom sizing available.

Banners wider or taller than 10 ft include a welded seam (a heat-bonded join between two vinyl panels).

Indoor/Outdoor Rating

Both indoor and outdoor use.

Outdoor-rated roughly 6 to 12 months with UV-resistant inks. Indoor banners stored flat last longer.

Single/Double-Sided

Single-sided is standard. Double-sided uses a blockout liner (a white layer between front and back prints that stops image show-through).

Order double-sided when both faces are visible, such as a banner suspended above a gymnasium floor.

Weight

11 oz for indoor hallway and gymnasium displays. 16 oz for outdoor fence-mounted banners facing wind, rain, and direct sun.

The heavier the weight, the longer it holds up through repeated mounting and seasonal weather.
