

Product Specification Sheet

Custom Sports Banners

Custom Sports Banners print on PVC Flex vinyl in two weights built for the demands of athletic venues. The 11 oz handles indoor gymnasium and arena displays. The 16 oz takes on outdoor field fencing and stadium mounting where wind load and long-term sun exposure are real factors.

Material

PVC Flex vinyl.

A smooth, glossy outdoor material that holds ink without cracking or peeling through weather exposure.

Print Method

Eco-solvent or UV inkjet.

Weather-resistant inks bond directly into the vinyl surface so colors stay sharp through rain and sun.

Color Output

CMYK full color.

Reproduces team colors, sponsor logos, and tournament graphics across the full visible color range.

Finishing

Brass grommets every 2 ft. Pole pockets. Hem and heat weld (folded edges sealed with heat for a reinforced border).

Choose the option that fits your mounting setup.

Size Range

Custom sizes available. Banners with a width or height over 10 ft include a welded seam (a heat-bonded join that holds panels together without weakening the banner).

Indoor/Outdoor Rating

Both. Outdoor banners hold color for roughly 6 to 12 months in direct sun. Indoor banners last longer because they avoid UV exposure entirely.

Single/Double-Sided

Single-sided is standard. Double-sided with a blockout liner is available for displays facing two directions.

Weight

11 oz for indoor or light-duty use. 16 oz for heavy-duty outdoor field fencing where a thicker, tougher material handles long-term exposure.
