

Product Specification Sheet

Custom Hockey Helmet Decals

Custom Hockey Helmet Decals are die-cut from 4 mil white PVC calendar film with a matte finish and a permanent adhesive back. They're built for the smooth, rounded shells of hockey helmets and hold up through cold arena temperatures, sweat, and contact. Roughly 3 to 6 months of active play is the typical lifespan before seasonal replacement.

Material

4 mil white PVC calendar film, matte finish.

A thin, flexible vinyl that conforms to rounded helmet shell curves without cracking or lifting at the edges.

Print Method

UV printed (ink cured instantly by ultraviolet light).

Produces a scratch-resistant, waterproof surface that holds up against arena humidity and sweat.

Color Output

CMYK full color at 720 DPI minimum.

CMYK (cyan, magenta, yellow, black) gives you accurate team colors across the full decal face.

Finishing

Die-cut to custom shape. Kiss-cut on backing sheet.

Kiss-cutting leaves the backing intact so each decal peels cleanly without tearing.

Size Range

Custom sizes up to 58.5 in wide.

Hockey helmet side logos typically run 2 to 4 in, well within the single-piece print limit.

Indoor/Outdoor Rating

Permanent adhesive rated for indoor and outdoor use.

Holds through cold arena temperatures for roughly 3 to 6 months of active play.

Single/Double-Sided

Single-sided.

The printed face carries your design. The adhesive back bonds directly to the helmet shell.

Weight

4 mil thickness.

Thin enough to sit flush on curved surfaces without interfering with cage or visor hardware.
