

Product Specification Sheet

Custom Indoor Wall Decals

Custom Indoor Wall Decals print on 4 mil white PVC calendar film with a paint-safe adhesive formulated for smooth interior surfaces. Full-color UV output at 720 DPI minimum gives you crisp, scratch-resistant graphics sized up to 58.5 in wide. Here's the thing: every spec below exists to match this decal to the right wall, the right size, and the right removal expectation.

Material

4 mil white PVC calendar film, matte finish.

A thin but sturdy vinyl sheet that lies flat against smooth interior surfaces without curling at the edges.

Print Method

UV printed (ink cured instantly by ultraviolet light).

Curing locks color into the surface immediately, giving you a scratch-resistant and water-resistant printed face.

Color Output

Full-color CMYK at 720 DPI minimum.

CMYK (cyan, magenta, yellow, and black) reproduces logos, photos, and text with accurate color across the full decal face.

Finishing

Die-cut to custom shape, kiss-cut on backing sheet.

Your decal arrives cut to your exact design outline, sitting on an intact backing sheet for clean peeling and placement.

Size Range

Custom sizes up to 58.5 in wide. Die-cut to any shape within that width.

Decals wider than 58.5 in ship as multiple aligned panels with overlap guides included.

Indoor/Outdoor Rating

Optimized for interior surfaces. Rated for painted drywall, plaster, smooth wood paneling, and interior concrete.

Also rated for smooth exterior walls when surface conditions allow.

Single/Double-Sided

Single-sided. Adhesive on the back, printed face on the front.

Not designed for see-through or double-faced applications.

Adhesive Type

Permanent adhesive formulated for interior painted surfaces.

Bonds firmly to fully cured paint and releases cleanly with slow peeling from one corner.
