

Product Specification Sheet

Custom Teardrop Backpack Flags

Custom Teardrop Backpack Flags run on 4 oz polyester mesh fabric printed with dye sublimation and ship with a full fiberglass and aluminum pole kit plus backpack harness. They suit both outdoor festivals and indoor convention floors, making them the most mobile branded display in our flag lineup.

Material

4 oz polyester mesh fabric.

Lightweight and breathable, so the flag moves naturally with the wearer without adding drag to the harness.

Print Method

Dye sublimation.

Ink bonds into the fabric fibers rather than sitting on the surface, so color does not crack or peel with repeated use.

Color Output

CMYK full color.

Any logo, gradient, or photographic image prints accurately across the full teardrop face.

Finishing

Fiberglass top pole section plus aluminum base sections with threaded connectors.

The fiberglass tip flexes without snapping. The aluminum base stays rigid in the harness mount.

Size Range

6 to 18 ft total height (flag plus pole combined).

Teardrop width varies by the height selected. Taller options clear standing crowd level by a wider margin.

Indoor/Outdoor Rating

Suitable for both indoor and outdoor use.

Outdoor lifespan runs roughly 3 to 6 months with regular event use. Indoor conditions extend flag life well beyond that range.

Single/Double-Sided

Available in single-sided or double-sided print.

Single-sided shows the design through to the reverse as a mirror image. Double-sided adds a blackout layer (an opaque middle layer that stops show-through) so both sides read correctly.

Weight

Roughly 3 to 5 lbs total for the flag and pole assembly.

The backpack harness distributes that weight across both shoulders so the wearer carries it through a full event day.
