

Product Specification Sheet

Custom Blade Clip Flags

Custom Blade Clip Flags are blade-shaped promotional flags printed on 4 oz polyester mesh fabric using dye sublimation. The clamp base mounts to any surface with an edge: trade show tables, tent poles, railings, and fences. They work indoors and outdoors without a ground spike or freestanding base.

Material

4 oz polyester mesh fabric.

The open-weave structure lets air pass through, reducing stress on the clamp and pole in outdoor wind.

Print Method

Dye sublimation printing.

Ink converts to a gas and bonds into the polyester fibers, so color cannot crack or peel off the surface.

Color Output

Full CMYK (cyan, magenta, yellow, black) dye sublimation.

All four ink channels combine to reproduce your logo and brand colors across the full blade face.

Finishing

Fiberglass and aluminum sectional pole with clamp base included.

The pole breaks into 3 to 4 sections and reassembles without tools for transport and reuse.

Size Range

Flag height runs 6 to 18 ft total depending on configuration selected.

Flag width varies by the blade shape dimensions chosen at checkout.

Indoor/Outdoor Rating

Suitable for both indoor and outdoor use.

Outdoor lifespan runs roughly 3 to 6 months with regular event use. Indoor use extends lifespan significantly.

Single/Double-Sided

Single-sided standard. Double-sided with a blockout layer available.

The blockout layer (a white interlining between two printed faces) stops show-through so both sides read correctly.

Weight

4 oz fabric weight.

Light enough for the clamp mount to hold securely on a table edge or tent pole without tipping or slipping.
