

Product Specification Sheet

Custom Teardrop Clip Flags

Custom Teardrop Clip Flags print on 4 oz polyester mesh fabric using dye sublimation. A clamp base mounts to table edges, tent poles, railings, and fences. They work indoors and outdoors without a freestanding base, making them the go-to flag for trade show tables and event activations where ground mounting is not possible.

Material

4 oz polyester mesh fabric.

The open-weave mesh lets air pass through, reducing stress on the clamp and pole in outdoor wind.

Print Method

Dye sublimation.

Ink bonds into the polyester fibers, so color stays sharp through repeated packing and unpacking across events.

Color Output

Full CMYK.

Cyan, magenta, yellow, and black combine to reproduce logos, gradients, and photographic images accurately across the flag face.

Finishing

Teardrop frame and clamp base hardware included.

No additional mounting hardware needed at the event.

Size Range

Flag height 6 to 18 ft depending on configuration.

Flag width varies with the teardrop shape at each height.

Indoor/Outdoor Rating

Suitable for both indoor and outdoor use.

Outdoor lifespan is roughly 6 to 12 months with regular event use. Indoor use extends beyond that range.

Single/Double-Sided

Single-sided print is standard. The design shows through to the back as a mirror image.

Double-sided uses two fabric layers with a blockout layer (a white barrier between printed sides) between them so both sides read correctly.

Mounting Hardware

Fiberglass and aluminum pole sections plus a clamp base.

The fiberglass top section flexes in wind without snapping.
