Product Specification Sheet

Custom Church Signs

Custom Church Signs are rigid 3/16 in foam core panels built for indoor worship and community facility signage. Each panel combines a polystyrene foam center with bright white faces and full-color UV printing. Best for lobbies, sanctuaries, fellowship halls, and campus wayfinding where a sturdy, lightweight display fits into existing frames.

Material

3/16 in white foam core. Polystyrene center bonded to bright white paper faces on both sides, giving you a flat, rigid panel.

Print Method

Direct UV print. Ink cures instantly on the foam core surface for a scratch-resistant finish that does not peel.

Color Output

CMYK full color. Cyan, magenta, yellow, and black inks reproduce your full logo palette, photography, and text accurately.

Finishing

No laminate needed. UV-cured surface is the finished face, with clean-cut edges ready for frames or adhesive strips.

Size Range

Standard sizes are 18x24 in and 24x36 in. Custom dimensions are available for non-standard frames or oversized lobby displays.

Indoor/Outdoor Rating

Indoor use only. UV-cured color holds up through years of typical indoor conditions without fading under interior lighting.

Single/Double-Sided

Single-sided or double-sided printing available. Double-sided panels work for freestanding frame displays visible from both directions.

Weight

Roughly 1 lb for a 24x36 in panel. One person carries, hangs, or swaps panels without tools.
