

Product Specification Sheet

Custom Conference Room Signs

Custom Conference Room Signs run on 3/16 in white foamcore, a rigid, lightweight panel with a polystyrene foam core and smooth bright white faces. These signs are sized for door and wall mounting in indoor commercial spaces, typically ordered as a matched set across a full floor or building.

Material

3/16 in white foamcore. Polystyrene core holds its shape in a frame or against a smooth wall without warping under normal indoor conditions.

Print Method

Direct UV print bonds ink to the foamcore face and cures it instantly, producing a scratch-resistant finish that stays sharp under indoor lighting.

Color Output

CMYK full-color (cyan, magenta, yellow, and black combined). Reproduces logos, color blocks, and room names accurately across every panel in a matched set.

Finishing

Clean-cut edges, flat-shipped, ready for frame insertion or adhesive mounting. Standard panels do not include grommets or pre-drilled holes.

Size Range

Typically 6x8 in to 10x12 in for standard conference room door signs. Custom dimensions are available for non-standard frames or wall cutouts.

Indoor/Outdoor Rating

Rated for indoor use only. Expected display life is open-ended with normal care indoors.

Single/Double-Sided

Single-sided printing is standard for door-mounted signs. Double-sided is available for panels displayed in freestanding frames or hallway hangers.

Weight

A 10x12 in panel weighs well under 1 lb, so adhesive strips hold it flat without wall anchors.
