

Product Specification Sheet

Custom Directory Signs

Custom Directory Signs are lobby-mounted listing boards printed on 3/16 in white Foamcore using direct UV printing in full CMYK color. They list every tenant, suite, or department in one organized display. Best for multi-tenant office buildings, medical campuses, and any facility where visitors need to find a specific room at the entrance.

Material

3/16 in white Foamcore. A polystyrene foam core bonded between two smooth bright white paper faces, rigid and flat for wall mounting.

Print Method

Direct UV print. Ink bonds to the Foamcore surface and cures instantly, resisting scratching and smearing under normal lobby conditions.

Color Output

Full CMYK. Reproduces logos, color-coded labels, and bold directory text accurately across the full panel.

Finishing

Clean-cut edges, ready to frame or mount. No lamination applied. The UV-cured surface is the finished face.

Size Range

Standard panels typically run 18x24 in to 24x36 in. Custom dimensions available to fit your frame or mounting location.

Indoor/Outdoor Rating

Indoor use only. Direct sun and moisture degrade the paper faces and cause warping over time.

Single/Double-Sided

Single-sided standard for wall-mounted directories. Double-sided available for freestanding or frame-mounted panels visible from both sides.

Weight

Roughly 1 to 2 lbs for a 24x36 in panel. Mounts easily with adhesive strips, standoffs, or a standard frame without heavy wall anchors.
