

Product Specification Sheet

Custom Door Signs

Custom Door Signs print on 3/16 in white foam core, a rigid polystyrene panel with smooth bright white faces on both sides. These signs run from 6x6 in up to 12x18 in and are rated for indoor use only. They suit suite numbers, room names, and office labels in climate-controlled commercial buildings.

Material

3/16 in white foam core. Polystyrene core with bright white faces. Rigid enough to mount in frames or adhere directly to a door without warping.

Print Method

Direct UV print. Ink bonds to the panel surface and cures instantly under UV light, giving a scratch-resistant finish.

Color Output

Full CMYK color. Cyan, magenta, yellow, and black combine to reproduce logos and room names accurately against the white face.

Finishing

No standard finishing applied. The bright white face is the print surface. Panels trim to custom sizes and fit standard sign frames.

Size Range

6x6 in to 12x18 in. Covers most interior door identification needs from small restroom labels up to full suite signs.

Indoor/Outdoor Rating

Indoor use only. Direct sun and moisture degrade the foam core face over time. Replace when edges show wear.

Single/Double-Sided

Single or double sided. Most door signs print single sided. Double-sided printing is available for signs that need to read from both directions in a frame.

Weight

Very lightweight. A full set of 20 or more foam core door signs ships at a fraction of the weight of metal or acrylic equivalents.
