

Product Specification Sheet

Custom Indoor Signs

Custom Indoor Signs run on 3/16 in white foam core, a rigid panel with a polystyrene foam center and smooth bright white paper faces on both sides. Direct UV printing lays full-color CMYK ink straight onto that white surface. These panels fit lobbies, conference rooms, retail counters, and presentation displays where a clean, crisp sign is needed without heavy mounting hardware.

Material

3/16 in white foam core. Polystyrene center with smooth bright white paper faces. White face gives UV ink a clean base so colors print true.

Print Method

Direct UV print. Ink bonds to the surface and cures instantly, giving a scratch-resistant finish that does not peel indoors.

Color Output

CMYK full color. Cyan, magenta, yellow, and black combine to reproduce logos, photos, and text across the full visible color range.

Finishing

Cut to size with clean straight edges. No grommets or pre-drilled holes on standard panels. Fits standard poster frames or mounts with adhesive strips.

Size Range

8 in by 10 in up to 24 in by 36 in. Custom sizes available for specific wall spaces or frame dimensions.

Indoor/Outdoor Rating

Indoor use only. Not rated for outdoor or prolonged direct sunlight. Expected display life is indefinite indoors, away from moisture and heat.

Single/Double-Sided

Single-sided or double-sided printing available. Double-sided suits freestanding panels visible from both directions in a hallway.

Weight

Under 1 lb for a 24 in by 36 in panel. Light enough to mount with adhesive strips and reposition without tools.
