

Product Specification Sheet

Custom Office Signs

Custom Office Signs print on 3/16 in white foam core, a polystyrene foam center bonded between two smooth bright white paper faces. The result is a rigid, flat panel suited for indoor frames, wall mounts, and presentation displays. Here is what each panel includes.

Material

3/16 in white foam core with a polystyrene center and smooth bright white paper faces.
Holds its shape flat against a wall or inside a standard office frame without bowing.

Print Method

Direct UV print, ink applied to the foam core surface and cured instantly by ultraviolet light.
Produces a scratch-resistant finish that does not smear or peel under normal indoor handling.

Color Output

CMYK full color using cyan, magenta, yellow, and black inks across the entire face.
Reproduces logos, photos, and text across the full visible color range on every panel.

Finishing

Flat panels ship with no laminate coating. Matte or gloss laminate is available at order for high-touch areas.
The UV-cured surface resists light scuffing straight from production.

Size Range

Name plates start at roughly 4 in x 8 in. Room labels run up to 12 in x 18 in.
Presentation boards reach up to 24 in x 36 in.
Custom sizes are available beyond these standard office formats.

Indoor/Outdoor Rating

Indoor use only. UV print holds color for years under typical office fluorescent or LED lighting.
Direct sun through a window will fade the surface faster than diffused indoor light.

Single/Double-Sided

Single-sided printing is standard for wall-mounted and framed signs. Double-sided is available for freestanding panels or corridor signs visible from both sides.

Weight

A 12 in x 18 in panel weighs roughly 3 to 4 oz.
Light enough to mount with adhesive strips and simple to reposition without wall damage.
