

Product Specification Sheet

Custom Restaurant Signs

Custom Restaurant Signs run on 3/16 in white foam core with a polystyrene core and bright white faces. Direct UV print bonds full-color ink to the surface instantly. These panels cover every indoor food service display need, from menu boards to compliance signage, without adding bulk or wall anchor hardware.

Material

3/16 in white foam core. Polystyrene core with smooth white faces gives ink a clean base so colors read accurately.

Print Method

Direct UV print cures ink instantly on contact with the surface, producing a scratch-resistant finish that handles routine wipe-downs.

Color Output

CMYK full-color using cyan, magenta, yellow, and black ink layers. Covers food photography, logo colors, and bold menu text without color gaps.

Finishing

Cut to size with clean edges. Fits standard poster and document frames. No grommets or mounting hardware on this material.

Size Range

Standard sizes include 8x10 in, 11x14 in, 18x24 in, and 24x36 in. Custom dimensions are available for non-standard frames or compliance display requirements.

Indoor/Outdoor Rating

Indoor use only. Keeps its shape and color for the life of the display, typically as long as the content stays current.

Single/Double-Sided

Single-sided or double-sided printing available. Double-sided works for signs hanging in a doorway or window where guests see both faces.

Weight

Very lightweight. A 24x36 in panel weighs roughly a few ounces, so it mounts with adhesive strips or sits in a frame without wall anchors.
