

Product Specification Sheet

Custom Wall Signs

Custom Wall Signs are 3/16 in white foam core panels printed with CMYK UV ink directly on a smooth bright white face. Each panel holds its shape flat on an interior wall under normal indoor conditions. These signs suit lobbies, offices, conference rooms, and point-of-sale displays where a crisp, sturdy printed surface needs to stay put without heavy hardware.

Material

3/16 in white foam core. Polystyrene foam center bonded between two smooth bright white paper faces. Holds flat indoors without bowing.

Print Method

Direct UV print. Ink cures instantly on the white face, giving you a scratch-resistant surface that holds sharp detail at 3 to 10 ft.

Color Output

CMYK full color. Cyan, magenta, yellow, and black layers reproduce logos, photos, and text across the full panel with no color limits.

Finishing

No laminate or coating applied. The UV-cured surface is the finished face. Keep it away from abrasive contact to maintain the surface.

Size Range

Custom sizes available. Standard sizes run from roughly 8 in x 10 in up to 24 in x 36 in. Larger formats available on request.

Indoor/Outdoor Rating

Indoor use only. Under normal indoor conditions, color holds and the panel stays rigid for the life of the installation.

Single/Double-Sided

Available single-sided for flat wall mounting or double-sided for frame display and presentation holders. Specify at order.

Weight

Very lightweight. Foam core weighs a fraction of aluminum or acrylic at the same size, so adhesive strips handle most installs cleanly.
