

Product Specification Sheet

Custom Warehouse Signs

Custom Warehouse Signs are rigid indoor panels built for facilities where large, bold text needs to read clearly across a bay or aisle. Each sign runs on 3/16 in white foam core, a polystyrene center with smooth bright white faces. Best for aisle markers, zone labels, dock signs, and safety markings in dry indoor environments.

Material

3/16 in white foam core with a polystyrene center and smooth bright white faces.

Holds flat on walls, frames, and shelving uprights without bowing under typical indoor conditions.

Print Method

Direct UV print, where ink bonds to the surface and cures instantly under UV light.

Gives you a scratch-resistant finish that does not smear or peel under normal indoor handling.

Color Output

CMYK full-color, combining cyan, magenta, yellow, and black to reproduce any color.

Covers color-coded zone systems and safety color standards accurately across every panel in a set.

Finishing

Straight cut edges, standard. Panels arrive ready to mount with adhesive strips, screws, or a frame channel.

Size Range

Standard sizes are 12x18 in, 18x24 in, and 24x36 in. Custom sizes available for bay entrance and dock door signage.

Indoor/Outdoor Rating

Indoor use only. Not rated for prolonged outdoor exposure. Expected indoor life typically spans the full life of your facility layout.

Single/Double-Sided

Single-sided or double-sided printing available. Double-sided panels work for overhead aisle markers readable from both directions.

Weight

Very lightweight. A standard 18x24 in panel is easy for one person to carry and position across a full warehouse floor.
