

Product Specification Sheet

Custom Aluminum Signs

Custom Aluminum Signs run on .040 aluminum (roughly 1 mm thick), UV printed in full color and rated for 5 to 10 or more years of outdoor exposure. Three standard sizes cover most permanent building and property installs. Here is what you get on every order.

Material

.040 aluminum. Rigid, rust-proof, and holds its flat shape in rain, snow, humidity, and coastal salt air without any protective coating.

Print Method

Direct UV printing. Ink bonds directly to the metal surface and cures instantly, giving you a scratch-resistant finish that does not peel or bubble.

Color Output

Full-color CMYK across the entire panel face. CMYK (cyan, magenta, yellow, and black) reproduces bold logos, photographs, and detailed text at sharp resolution.

Finishing

Straight or rounded corners available. Pre-drilled mounting holes at all 4 corners standard. Order undrilled if your mount does not need them.

Size Range

Three standard sizes: 12x18 in, 18x24 in, and 36x24 in. All dimensions are width by height.

Indoor/Outdoor Rating

Rated for 5 to 10 or more years outdoors. UV-printed graphics resist fading for 5 to 7 years of direct sun. Indoor lifespan extends well beyond 10 years.

Single/Double-Sided

Single-sided prints one face. Double-sided prints both faces of the same panel for post-mounted or hanging signs facing two directions.

Weight

Lighter than steel at the same thickness. Wall and post mounting stays manageable without heavy-duty anchors on most surfaces.
