

Product Specification Sheet

Custom Metal Indoor Signs

Custom Metal Indoor Signs run on .040 aluminum (roughly 1 mm thick), UV printed in full color on a white metal face. They suit lobbies, hallways, conference rooms, warehouses, and any interior wall where a sign needs to hold up for five or more years without replacement.

Material

.040 aluminum, roughly 1 mm thick rigid metal sheet.

Rust-proof. Does not warp, crack, or absorb moisture indoors or outdoors.

Print Method

Direct UV print, ink applied and cured instantly by ultraviolet light onto the aluminum surface.

Produces a scratch-resistant, waterproof color layer that will not peel or bubble.

Color Output

Full color across the entire face using CMYK printing on a white aluminum base.

White base gives the most vibrant color reproduction of any opaque sign material.

Finishing

Straight or rounded corners available at order.

Rounded corners (smooth curved edge at each corner) reduce sharp points and suit interior walls.

Size Range

Three standard sizes: 12x18 in, 18x24 in, and 36x24 in.

All three sizes available in single or double sided.

Indoor/Outdoor Rating

Rated for long-lasting indoor use. Also holds up outdoors for 5 or more years.

Indoor environments typically extend that lifespan well beyond the outdoor rating.

Single/Double-Sided

Single-sided prints one face. Double-sided prints both faces on the same panel.

Useful for hallway signs that need to read clearly from two directions.

Weight

A 12x18 in panel weighs roughly 8 oz. A 36x24 in panel weighs roughly 2 lbs.

Standard wall anchors handle the load without reinforcement on any of the three sizes.
