

Product Specification Sheet

Custom Metal Outdoor Signs

Custom Metal Outdoor Signs are .040 aluminum panels UV-printed in full color and built for permanent outdoor use. Each panel resists rust, warping, and fading through years of direct sun, rain, and freeze cycles. Here is what goes into every sign.

Material

.040 aluminum (roughly 1 mm thick).

This gauge does not rust, rot, or warp in rain, snow, humidity, or coastal salt air.

Print Method

Direct UV print.

Ink bonds to the aluminum surface and cures instantly, giving you a scratch-resistant, waterproof finish.

Color Output

Full-color CMYK.

CMYK (cyan, magenta, yellow, and black combined) runs on a white aluminum base for the most vivid color reproduction.

Finishing

Straight or rounded corners, buyer's choice.

Rounded corners reduce sharp edges on signs mounted at shoulder height where people pass close by.

Size Range

12x18 in, 18x24 in, and 36x24 in standard. Custom dimensions available on request.

Indoor/Outdoor Rating

Rated for outdoor use. UV-printed graphics typically hold up 5 to 7 years in direct sun.

The aluminum panel itself lasts well beyond that with no rust or structural degradation.

Single/Double-Sided

Single-sided or double-sided printing available.

Double-sided suits post-mounted signs readable from both directions at a driveway or parking lot entrance.

Weight

A 36x24 in panel weighs roughly 2 to 3 lbs.

That keeps wall and fence mounting manageable without heavy anchoring hardware.
