

# Product Specification Sheet

## Custom Metal Street Signs

Custom Metal Street Signs run on .040 aluminum, a rigid rust-proof metal sheet roughly 1 mm thick. Direct UV printing bonds full-color ink directly to the panel surface for a tough, waterproof finish rated for long-lasting outdoor use. These signs suit decorative community identification, campus wayfinding, and novelty displays equally well.

### Material

.040 aluminum rigid metal sheet.

Rust-proof in rain, snow, humidity, and coastal salt air with no protective coating needed.

### Print Method

Direct UV print (ink applied and cured instantly by ultraviolet light onto the aluminum surface).

The cured ink bonds to the metal for a scratch-resistant, waterproof finish.

### Color Output

Full-color CMYK across the entire panel face.

Reproduces logos, gradients, and photographic images with crisp edges and bold contrast.

### Finishing

Straight or rounded corners available.

Rounded corners match standard municipal street sign conventions. Straight corners suit industrial or novelty displays.

### Size Range

12x18 in, 18x24 in, and 36x24 in.

The 36x24 in panel reads clearly from roughly 50 ft away in typical daylight conditions.

### Indoor/Outdoor Rating

Rated for long-lasting indoor or outdoor use.

UV-printed graphics hold color for 5 to 7 years in direct sun. The aluminum panel itself does not degrade outdoors.

### Single/Double-Sided

Single-sided for wall-mounted or post-mounted applications where one face is visible.

Double-sided for post-mounted signs readable from both directions on a two-way street.

### Corner Style

Straight or rounded, selected at checkout.

Specify your choice before uploading your file so hole positions align with your layout.
