

Product Specification Sheet

Custom Metal Wall Signs

Custom Metal Wall Signs ship as flat .040 aluminum panels, UV-printed in full color and ready to mount on interior or exterior walls. They're built for permanent building identification, suite numbers, and outdoor directional signage that needs to stay readable for 5 or more years without replacement.

Material

.040 aluminum (roughly 1 mm thick, rust-proof, rigid).

Doesn't corrode in rain, snow, humidity, or coastal salt air.

Print Method

Direct UV print, ink bonded to the aluminum surface by ultraviolet light.

Produces a scratch-resistant, waterproof finish that won't peel or bubble.

Color Output

Full-color CMYK (cyan, magenta, yellow, and black combined to reproduce any color in your design).

Printed on a white aluminum base for the most vivid color reproduction.

Finishing

Straight or rounded corners.

Rounded corners reduce sharp edges in high-traffic areas. Straight corners suit industrial and grid-aligned layouts.

Size Range

12x18 inches. 18x24 inches. 36x24 inches.

Each size targets a different application, from suite numbers up to full facade identification.

Indoor/Outdoor Rating

Rated for both. Outdoor lifespan is 5 or more years in direct sun and weather.

UV-printed graphics resist fading for 5 to 7 years. Indoor signs last indefinitely with normal care.

Single/Double-Sided

Single-sided suits flat wall mounting. Double-sided suits signs hung perpendicular to a facade so both faces stay readable from opposite directions.

Weight

Lighter than steel, heavier than foam board or corrugated plastic.

A 36x24 inch panel is manageable for a two-person wall installation without specialized lifting equipment.
