

Product Specification Sheet

Custom Gator Board Signs

Custom Gator Board Signs are rigid indoor display boards built on a dense foam core with wood-fiber laminate faces on both sides. Wood-fiber faces resist denting and stay flat at large sizes where polystyrene faces on standard foam board would bow. These boards are the stiffest of the four rigid sign substrates we carry.

Material

Gator board. Dense foam core with wood-fiber laminate faces bonded to both sides.

Wood-fiber faces are harder than polystyrene, which keeps the board flat and dent-resistant at large sizes.

Print Method

UV-printed adhesive vinyl adhered to the board face.

UV curing locks ink into the vinyl surface, so colors resist scratching and fading under indoor lighting.

Color Output

CMYK full-color.

Four ink channels reproduce photographs, gradients, and detailed graphics accurately across white or black face.

Finishing

No additional lamination or coating applied.

The adhesive vinyl face is the finished surface. Boards ship ready to display.

Size Range

Custom sizes up to roughly 4 ft x 8 ft. Standard sizes include 12x18, 18x24, and 24x36 in.

Custom dimensions run on the same 1 to 2 business day production timeline.

Indoor/Outdoor Rating

Indoor use only. Display life typically measures in months to years depending on handling.

Moisture at unsealed edges can cause delamination over time. Not rated for outdoor exposure.

Single/Double-Sided

Both options available.

Double-sided boards use the same adhesive vinyl process on both faces, useful for freestanding displays viewed from two directions.

Weight

Roughly 2 times the weight of standard foam board at the same size.

Both 3/16 in and 1/2 in versions stay lighter than aluminum or acrylic signs of equivalent dimensions.
