

Product Specification Sheet

Custom Sintra Signs

Custom Sintra Signs are rigid boards made from expanded PVC (a solid, dense plastic with no foam core) and UV printed in full color on a smooth matte surface. They hold flat in humid environments and covered outdoor areas where foam board fails. Best for indoor retail displays, point-of-sale signage, and semi-outdoor covered locations.

Material

Sintra expanded PVC. Solid, dense plastic sheet in 1 mm, 3 mm, and 6 mm thicknesses. Denser and more rigid than standard foam board across all three sizes.

Print Method

Direct UV print. Ink applies directly to the board surface and cures instantly by UV light for a scratch-resistant finish that does not peel or lift.

Color Output

Full CMYK color. Reproduces the complete color range in your artwork using cyan, magenta, yellow, and black ink.

Finishing

Smooth matte surface on all thicknesses. No laminate layer added. Reduces glare under retail and office lighting.

Size Range

Custom sizes available. Standard sizes include 12x18 in, 18x24 in, and 24x36 in. Larger custom dimensions vary by thickness selected.

Indoor/Outdoor Rating

Indoor use and semi-outdoor covered areas (awnings, covered walkways). Not rated for sustained direct weather exposure.

Single/Double-Sided

Single-sided or double-sided printing available on all thicknesses. Double-sided suits hanging signs visible from both directions.

Weight

Slightly heavier than standard foam board due to solid PVC construction. Lighter than aluminum or acrylic signs of the same size.
