

Product Specification Sheet

Custom Parking Signs

Custom Parking Signs run on .040 aluminum, a rigid, rust-proof metal sheet that holds its shape on a post mount through years of outdoor exposure. Three sizes and two corner styles let you match the sign to the lot application. These specs cover every standard configuration we produce.

Material

.040 aluminum (roughly 1mm thick, rust-proof).

It stays rigid on a post mount without bending under wind or impact for 5 or more years.

Print Method

Direct UV print, full color, applied directly to the aluminum surface.

Ink cures instantly under ultraviolet light, producing a waterproof, scratch-resistant finish that won't peel.

Color Output

Full-color CMYK. Green and blue backgrounds follow MUTCD parking sign conventions.

Custom colors and logos print at the same resolution as standard templates.

Finishing

Straight or rounded corners. Pre-drilled holes included for post or wall mounting.

Rounded corners reduce sharp edges near pedestrian walkways and building entrances.

Size Range

12x18 in, 18x24 in, and 36x24 in.

The 18x24 in is the most common choice for lot-entrance and row-header signs.

Indoor/Outdoor Rating

Rated for permanent outdoor use. Color holds up 5 or more years in direct sun and weather.

No protective coating is needed. Aluminum does not rust.

Single/Double-Sided

Single-sided covers most post-mounted applications. Double-sided is available for signs readable from two directions.

Double-sided printing cuts the number of posts you need roughly in half.

Corner Style

Straight corners are standard. Rounded corners are available at no added lead time.

Choose rounded for any sign near a sidewalk or building entrance where someone could brush the edge.
