

Product Specification Sheet

Custom Reserved Parking Signs

Custom Reserved Parking Signs run on .040 aluminum, a rigid metal sheet roughly 1mm thick that holds up outdoors without rusting or warping. These signs suit parking lot management, ADA handicap space identification, and any reserved-space assignment that needs to last 5 or more years in direct weather.

Material

.040 aluminum (rigid, rust-proof metal sheet, roughly 1mm thick).

Does not rust, warp, or crack under freeze-thaw cycles or road salt exposure.

Print Method

Direct UV print (ink applied directly to aluminum, cured instantly by ultraviolet light).

Produces a scratch-resistant, waterproof surface that won't peel or fade in direct sun.

Color Output

Full color across the entire sign face.

ADA handicap signs print in standard blue with white text and the International Symbol of Access at the correct contrast ratio.

Finishing

Straight or rounded corners available. Pre-drilled holes for post or wall mounting are standard.

No additional hardware is included unless specified as an add-on.

Size Range

Three standard sizes: 12x18 in, 18x24 in, and 36x24 in.

The 18x24 in is the most common parking lot size for center-aisle post mounting.

Indoor/Outdoor Rating

Rated for indoor or outdoor use. Outdoor lifespan is 5 or more years in direct sun and weather.

Indoor signs last longer with no UV or moisture exposure.

Single/Double-Sided

Single-sided or double-sided printing available.

Double-sided signs read from both driving directions, useful for center-aisle post mounting.

Weight

A standard 18x24 in sign weighs roughly 1 to 2 lbs.

Lightweight enough for straightforward post or wall mounting without heavy hardware.
