

Product Specification Sheet

Custom Speed Limit Signs

Custom Speed Limit Signs ship on .040 aluminum, a rigid rust-proof metal sheet roughly 1mm thick. This is the material gauge used on standard public road signs, and it holds its shape on a post through wind, rain, and direct sun. Three sizes cover most private road and parking lot applications.

Material

.040 aluminum, rust-proof and rigid.

Same gauge as standard public road signs. Holds flat on a post without warping in heat or freeze-thaw cycles.

Print Method

Direct UV print, ink cured instantly by ultraviolet light bonded to the aluminum face.

Scratch-resistant and waterproof. The printed surface won't peel, bubble, or fade under outdoor conditions.

Color Output

Full-color CMYK. Standard layouts use bold black text on a white background per MUTCD convention.

Custom color layouts are available for campus or community branding needs.

Finishing

Straight or rounded corners.

Rounded corners reduce sharp edges on post-mounted signs in pedestrian areas. Straight corners suit most roadside applications.

Size Range

12x18 in, 18x24 in, and 24x36 in.

The 18x24 in size matches the most common private-road speed limit sign dimension.

Indoor/Outdoor Rating

Rated for outdoor use 5 or more years. Aluminum doesn't rust, and UV-printed ink holds color in direct sun without fading.

Single/Double-Sided

Single-sided or double-sided printing available.

Double-sided is useful at two-way intersections where traffic approaches from both directions.

Mounting

Pre-drilled holes for post, wall, or fence mounting.

U-channel posts and mounting hardware are not included unless added as an option at checkout.
