

Product Specification Sheet

Custom Street Signs

Custom Street Signs run on .040 aluminum, the industry-standard gauge for outdoor road signage. Each sign prints in full color via direct UV print and holds up outdoors for 5 or more years without rusting. These signs cover street name identification and directional use on private roads, HOA communities, and campuses.

Material

.040 aluminum (roughly 1mm thick). Rigid enough for post mounting without bending. Rust-proof for permanent outdoor use.

Print Method

Direct UV print. Ink bonds to the aluminum surface and resists scratching, not a film applied on top.

Color Output

Full color. Street name text, directional arrows, community logos, and background colors all print in one pass.

Finishing

Straight or rounded corners available. Rounded corners reduce sharp edges on pedestrian-level signs and suit decorative community styles.

Size Range

12x18 in, 18x24 in, and 36x24 in. Covers single-blade nameplates up to wide dual-street directional installs.

Indoor/Outdoor Rating

Rated for 5 or more years outdoors. UV-cured ink resists fading through direct sun and rain exposure.

Single/Double-Sided

Single-sided printing suits post-mounted signs where traffic approaches from one direction. Double-sided is available for blade signs readable from both directions.

Sign Type

Street name and directional. MUTCD-style green-and-white layouts and decorative community styles with custom colors and fonts are both available.
