

Product Specification Sheet

Custom Graduation Yard Signs

Custom Graduation Yard Signs print on 4mm corrugated plastic (also called Coroplast), a rigid, lightweight, waterproof sheet built for temporary outdoor display. Direct UV ink bonds to the surface and resists fading through weeks of rain, sprinklers, and sun. These signs are built for the 2 to 4 week graduation display window, with durability that easily covers the full season.

Material

4mm corrugated plastic (Coroplast).

Rigid, waterproof, and lightweight. Handles rain and sprinklers without warping across the display period.

Print Method

Direct UV print.

Ink bonds directly to the plastic surface and cures instantly, giving a scratch-resistant, weatherproof finish.

Color Output

Full CMYK color.

Cyan, magenta, yellow, and black combine to reproduce student photos and school colors accurately on every sign.

Finishing

Wire H-stakes included. Grommets available on request.

H-stakes slide into the corrugated flutes and push into lawn soil without drilling.

Size Range

Custom sizes available. Signs wider than 48 in have horizontal flutes running left to right.

Contact us before ordering oversized signs, as horizontal flutes affect how the H-stake inserts.

Indoor/Outdoor Rating

3 to 6 months continuous outdoor exposure.

Stored flat and dry between uses, the same sign typically holds up across multiple graduation seasons.

Single/Double-Sided

Both available on every order.

Double-sided is the better choice for corner lots or two-way streets where traffic passes from both directions.

Flute Direction

Vertical on signs up to 48 in wide. Horizontal on signs over 48 in wide.

Flute direction determines how the H-stake slides in, so size affects mounting, not just appearance.
