## Custom Happy Birthday Yard Signs

Custom Happy Birthday Yard Signs are built on 4mm corrugated plastic (also called Coroplast), a rigid, waterproof fluted sheet that handles rain and moderate wind without warping. Every sign ships flat with H-stakes included. This is a short-term outdoor product rated for 1 to 3 day birthday displays, with material durability running 3 to 6 months of continuous outdoor exposure.

### Material

4mm corrugated plastic (Coroplast). Lightweight, waterproof, and rigid enough to hold its shape in moderate outdoor conditions.

### Print Method

Direct UV print bonds ink to the plastic surface and cures it instantly with UV light, giving a scratch-resistant finish.

### Color Output

CMYK full-color UV print using four ink layers: cyan, magenta, yellow, and black for sharp, accurate color reproduction.

### Finishing

H-stakes included with every order. Grommets available for fence or railing mounting as an alternative to ground staking.

### Size Range

Custom sizes available. Signs wider than 48 in carry horizontal flutes rather than vertical, which affects how the H-stake inserts at the bottom edge.

### Indoor/Outdoor Rating

Rated for roughly 3 to 6 months of continuous outdoor exposure. Deploy-and-retrieve use across 1 to 2 years is typical for reusable designs stored flat indoors between birthdays.

### Single/Double-Sided

Both options available. Double-sided suits corner lots and two-way streets where drivers approach from opposite directions.

### Flute Direction

Vertical on signs 48 in wide or narrower. Horizontal on signs wider than 48 in.
