

Product Specification Sheet

Custom Open House Yard Signs

Custom Open House Yard Signs print on 4mm corrugated plastic, the same rigid, fluted sheet used across every yard sign in our catalog. Each sign ships ready to stake, hang, or both. It's the right choice for agents who deploy a set on Saturday morning and retrieve it by Sunday evening.

Material

4mm corrugated plastic (Coroplast), a rigid, fluted, waterproof plastic sheet with hollow channels that accept H-stake wire legs for ground mounting.

Lightweight and sturdy enough to hold its shape through a full day of outdoor exposure without warping.

Print Method

Direct UV print bonds ink to the corrugated plastic surface and cures instantly under UV light.

The finish is scratch-resistant and won't peel or bubble in rain.

Color Output

CMYK full-color using cyan, magenta, yellow, and black ink layers.

Reproduces bold arrows, agent photos, and brokerage logos in accurate color.

Finishing

H-stakes included for ground mounting. Grommets available for fence or post hanging.

Signs wider than 48 in shift to horizontal flutes to maintain rigidity at larger widths.

Size Range

Standard open house directional sizes run 18x24 in and 24x36 in. Maximum width is 4 ft.

Custom sizes are available through the configurator.

Indoor/Outdoor Rating

3 to 6 months of continuous outdoor exposure. With deploy-and-retrieve use, the same set typically lasts 1 to 2 years across multiple listing cycles.

Single/Double-Sided

Both options available. Double-sided covers intersection placements where drivers approach from both directions.

Weight

A standard 18x24 in sign weighs roughly 0.5 lb, so a set of 5 signs with H-stakes loads easily into a car trunk.
